

The story of honey has been depicted in an 8,000-year-old cave painting in Spain. It's been used for food, medicine and more by cultures all over the world since. Lucky for us, bees make more honey than their colony needs, and beekeepers remove the excess and bottle it. Based on Federal Drugs Administration (FDA) research, some positive effects on allergies suffering come from the fact that honey bees carry the pollens from the flowers and when they return to the hives to deposit nectars the pollens are deposited in the hives unintended and honey users intake a slow dose of pollens

unintended and their immunity system gets strong against to fight against the pollens later. The researchers also found that this effect is local and people who get the effect are in a 60 -100 miles radius of the hives.

This honey is brought to you locally produced in Gaithersburg. The types of honey we bring to you are: Raw and unfiltered, Creamed, and chunk.

Promotions: (301-221-9142)
